QUARTERLY REPORT 31 MARCH 2004

SOUTH AFRICAN OPERATIONS

Chromite Tailings Retreatment Consortium

During the quarter, Sylvania Resources Limited ("Sylvania") announced that it had entered into an agreement to acquire a 25% interest in a Consortium (known as RK1) led by Aquarius Platinum Limited which will undertake a project to treat chromite tailings through a purpose built plant at its Kroondal Mine in order to extract platinum group metals (platinum, palladium, rhodium and gold).

The initial year of the project is expected to yield in excess of 20,000 ounces of Platinum group metals ("PGMs"), growing to 28,000 ounces per year from the second year, with 25% of the production attributable to Sylvania.

The capital cost of the project, which is to be managed by Aquarius Platinum (South Africa) (Pty) Ltd, is estimated to be R28.5 million (including working capital) with plant construction commencing this quarter and a rapid ramp-up to full production being achieved by December 2004. At an exchange rate of R7/US\$1, operating costs are expected to be US\$170 per PGM ounce in year one and reducing to US\$145 per PGM ounce thereafter.

The project economics have been conservatively modeled and are very robust over a wide range of metal prices and exchange rate assumptions. An after-tax internal rate of return of 72% is generated at the current basket price of US\$521 per PGM ounce with an exchange rate of R7/US\$1.

During the construction of the RK1 plant, the consortium will commence work on RK2, which will be a similar style chromite retreatment project centred on Aquarius' Marikana Mine. Discussions relating to a proposed RK3 project are also underway.

The Directors of Sylvania see participation in this consortium as a rare opportunity to gain access to PGM cashflow, with low risk, and immediate potential for growth of the earnings stream via the development of further chromite retreatment projects.

Sylvania has entered into a Deed of Novation with Victoria Global Holdings ("Victoria"), which outlines the terms of Sylvania's entry into the Consortium. Under the terms of the Deed of Novation, Sylvania will acquire its 25% interest in the Consortium by funding £625,000 towards the capital costs of the project, and issuing 6 million fully paid shares in the Company to Victoria.

Sylvania received shareholder approval on 22 April 2004 to raise up to £2.5 million from institutional investors in London, through a placement of up to 18.5 million fully paid ordinary shares in the Company at an issue price of £0.135 per Share. These funds will be utilized to fund Sylvania's commitment to the RK1 Project, and provide Sylvania with additional funds to assess a number of other PGM projects in South Africa.

QUARTERLY REPORT 31 MARCH 2004

AUSTRALIAN OPERATIONS

Exploration by Sylvania within Australia has been focused on the Archean Sylvania Inlier, situated in Western Australia. Within this area the Company still retains mineral exploration projects known as Copper Knob and Jimblebar. The projects lie east and south of Newman and are located within the Peak Hill Mineral Field. Exploration on these tenements has targeted gold, copper-zinc, nickel and platinum group element mineralization.

1. JIMBLEBAR COPPER/GOLD (45 kms east south east of Newman; Sylvania 80% P52/869 & MLA52/739, Sylvania 100% others)

The Jimblebar tenements lie immediately south east of the currently operating Jimblebar iron ore mine. Sylvania's interests now relate to two prospecting licences, with one of the latter associated with a mining lease application, covering an area of approximately 200 hectares.

The main area of interest for copper in the Jimblebar tenements is a prospective sequence of metamorphosed felsic and intermediate volcanics containing magnetite outcrops as well as several occurrences of outcropping secondary copper mineralization.

No field work was undertaken by the Company during the quarter.

2. COPPER KNOB (42 kms east south east of Newman; Sylvania 100%)

The Mining Lease 52/211 at Copper Knob, covers a very large body of disseminated low grade sulphide copper mineralization with some gold values that has been drilled by previous explorers. This mineralization lies within a sequence of felsic and intermediate volcanic rocks that extend for over 9 kilometres forming the Jimblebar copper area. The Copper Knob mining lease has untested potential for an oxide copper resource and for discrete massive copper bearing sulphide bodies.

No field work was undertaken by the Company during the quarter.

Notes

-
- 1 This quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
 - 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
 - 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
 - 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
 - 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
